

# Eliminating open water stress and fatigue with Expro's ArticuloLock<sup>®</sup>

Specializing in the well construction sector, Expro has developed pioneering technologies applicable to all types of well construction projects.

By utilizing our low-risk solutions, operators are reducing their carbon footprint, increasing operational efficiency, and improving the overall well construction process.

## Do you want to eliminate bending stress and fatigue?

Expro is committed to providing innovative and forward-thinking solutions to open up the weather window and eliminate previously unavoidable downtime associated with harsh offshore weather conditions.

ArticuLock® eliminates stress and fatigue through a ball and socket technology that enables +/-15deg of articulation in any orientation, extending the weather window for the deployment of subsea architecture and providing a contingency to continue operations in high significant wave height and current.
