

Data to Desk surpasses one million hours of data transmission

Data to Desk surpasses one million hours

Our Data to Desk service is a proven capability for transmitting and presenting real-time data.

Customers can conveniently access their data from the desk or remotely from any location. This ensures uncertainties are reduced and decisions regarding operational performance are based on real-time data. This is extremely beneficial in situations where key personnel face challenges in accessing certain locations.

Features and benefits

- Data transmission and real-time monitoring play a crucial role in enabling our customers to effectively monitor and evaluate reservoir, well, or production performance in real-time to maximize the commercialization of the reservoir and increase or maintain production targets.
- By globally sharing data, our customers have the confidence that decisions are made with accuracy, considering all available data to evaluate deliverables, assess operational performance and optimize operating time.
- Our web-based service delivers real-time data, providing reservoir and production teams with accessible decision-making capabilities regarding operational deliverability and performance.
- The implementation of remote data monitoring transforms efficiency and productivity through the ability to analyze and monitor data.
- Direct messaging improves communication allowing our customers to streamline their workflow.
- When used as part of an overall data solution, our Data to Desk service can identify anomalies and facilitate the swift implementation of corrective actions.
