

Expro Excellence
**Expro's carbon-efficient
 solution reduces operating
 CO2 footprint by 57%**

Well Testing

Customer challenges

- Expro has been the main SWT provider for a major client in Egypt for over 10 years
- They were looking for someone to supply a solution for heating their crude oil up to 85°C

Expro Excellence

- Expro provided a technical solution that increased the heating capacity that was delivered to the client onsite and furthermore reduced the environmental impact of Expro's footprint operation at the client's site by 57%

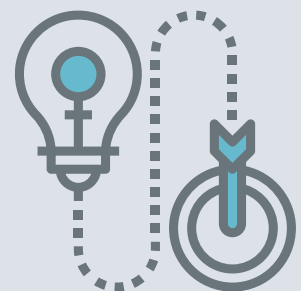

Value to the client

- Expro improved the water separation with minimum oil in water content inline to the client specification
- The client's water disposal solution lead to a significant reduction in work for soil remedial after the client's operations
- Improved salt separation process by increasing outlet temperature up to 95°C

Environment

Innovative solution
