Frank's Tubular Running Services (TRS)

DATA TREK® Remote CAM Viewer (RCV)

The DATA TREK® Remote CAM Viewer (RCV) is a digital application package that allows tong operators to set-up, analyze, and approve torque-turn graphs without relying on dedicated computer technicians.

The system is specifically adapted to land applications by utilizing a wireless adapter to relay the DATA TREK® Advantage Computer System directly to the tong-mounted tablet.

The DATA TREK® Advantage Computer System remains in the class-free area and allows the tong operator to maintain full functionality through the wireless control tablet.

When used with our iCAM® Connection Analyzed Make-up System, this digital, automated technology package enhances operational run times and reduces personnel on board by utilizing machine learning to improve accuracy, consistency, and reliability in connection assessment.

Features and benefits

- Reduces personnel on board by utilizing the tong operator to remotely control the DATA TREK® Advantage Computer System from the tong-mounted tablet
- Increases rig-time efficiencies by allowing the tong operator to review the final torque application in real-time
- Safe, reliable UL, IECEx, and ATEX certified hardware ensures compatibility with regional requirements for optimal operational flexibility
