Frank's Tubular Running Services (TRS)

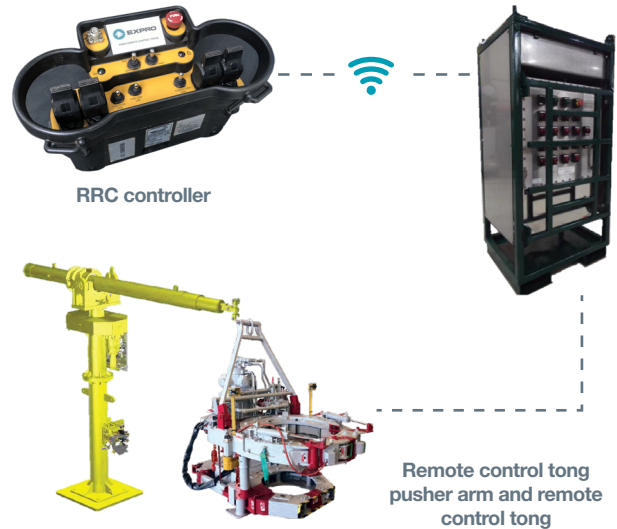

Radio Remote Control (RRC) – Wireless Controls for Expro's Tong Systems

Expro's Radio Remote Control System reduces operational risks and hazards by eliminating the personnel at the rig floor to operate the Tong systems from inside the driller's cabin.

The wireless capabilities allows the operator to be flexible during operations and aids in quick equipment setup with wireless communication established by the controller and console.

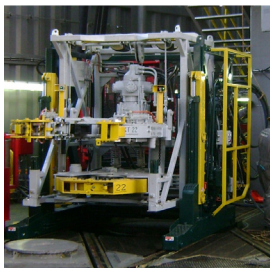

Features and benefits

- Enables Wireless-Control of any Expro's Power Tong
- The system, including the controller and the RRC console are ATEX Zone 1 certified
- First deployed in 2014 with an extensive run history
- Excellent reliability record

RRC compatibility with different tong systems

RTS carriage and cassette systems

Modular casing cassette tongs

Tong Pusher Arm (TPA)

Tong Hanging Frame (THF)
