

Well Intervention

Wire Clamp

The Wire Clamp has been designed to securely hold the Slick E-line in a fixed position when in a fishing scenario. The clamp is a precision-engineered wire-retaining groove to minimise risk of damaging the coating of wires.

The Wire Clamp is specifically designed to grip around the Slick E-line wire in order to prevent any movement. These clamps are designed to hold the wire in tension above the closed BOP's during fishing operations.

The internal wire-locating groove has been machined with tight tolerances to ensure a secure fit but also not to damage the coating on the wire. There is a single certified shackle point incorporated into the design for holding the clamp in position.

Technical specifications

Part number	A1205566	Metric
Wire diameter	4.06 mm	0.160"
Maximum load rating	1000 kg	2200 lbs
Bolt torque valve	14.5 Nm	10.7 lb/ft.
Weight	4.0 kg	8.8 lbs
Materials	Corrosion resistant throughout
